1. Project Overview

Project Title: Dr. RVR & NRI University Information Website

Project Type: Static informational webpage developed using HTML5 and CSS3.

Purpose: To present basic information about the university, including an introduction, courses, facilities, university details and contact information.

2. Introduction

The Dr. RVR & NRI University Information Website is a simple static webpage designed to display introductory information about the university in one place. It welcomes visitors with the university name and a building photograph, followed by sections that describe the institution, list selected engineering courses and facilities, and provide basic contact information. The page is intended to help a visitor quickly read the information available in the project.

The webpage uses a straightforward single-page layout. Its content is organized with semantic HTML elements such as header, main, section, article and footer. CSS is used to apply the orange background, white text, centered heading and image, and a bordered outer container.

3. Technologies Used

- HTML5: Defines the webpage structure and content, including headings, paragraphs, lists, a table, an image, a hyperlink, and semantic page sections.
- CSS3: Controls the visual presentation through text alignment, background colors, text colors, margins, border, rounded corners and padding.
- Local image asset: The supplied file imaaa.jpg.jpeg is displayed as the university building image. It is an asset used by the HTML page, not a separate programming technology.

No JavaScript, database, server-side language or external CSS framework is referenced in the supplied source code.

4. Webpage Description

4.1 Header

The header displays the heading “Dr. RVR & NRI University”. It is centered using the class1 and class2 CSS rules. The class2 rule gives the heading area a dark orange background and white text.

4.2 University Image and Welcome Section

A centered image is shown below the header. The image source is imaaa.jpg.jpeg and its alternative text is “nri”. A horizontal rule separates the image area from the welcome content. The welcome section contains the heading “Welcome to Our University” and a short paragraph about quality education, knowledge and skills.

4.3 About Us and Courses Offered

The About Us subsection contains a paragraph describing the university’s focus on academic excellence, practical learning, innovation and student development. The Courses Offered subsection uses an unordered list to show five programmes: Computer Science Engineering, Electronics and Communication Engineering, Electrical and Electronics Engineering, Mechanical Engineering and Civil Engineering.

4.4 University Information

A table is intended to show the university name, location and type. The table has two column headings, “Details” and “Information”. The supplied HTML has a markup error in the third data row: the text “Type” is not enclosed in an opening td tag. The browser-style renderer therefore parses that row imperfectly; the source is reproduced unchanged in this report.

4.5 Facilities and Contact Us

The Facilities subsection uses an ordered list containing Library, Computer Laboratories, Sports Facilities and Hostel Facilities. The Contact Us subsection displays the email address info@example.com and a hyperlink labelled “RVR & JC College Website”, which points to https://www.rvrjc.ac.in/.

4.6 Footer and Overall Styling

The footer displays “© 2026 University Information Page”. The main content, header and footer use a dark orange background with white text. The outer .all container has a 5-pixel black border, rounded corners, 12-pixel margin and 10-pixel padding. The image and selected text containers are centered. No custom font family or font-size rule is specified in the CSS, so the rendered page uses the renderer’s default serif font.

5. Actual Webpage Output

The following screenshot was rendered locally from the supplied collage.html and collage.css files together with the supplied imaaa.jpg.jpeg image. It shows the complete single-page output, including the header, building image, content sections, information table, lists, contact link and footer. The screenshot is an output capture of the supplied source; it is not an illustrative mock-up.

Figure 1. Full-page rendering of the University Information Website.

6. Output Explanation

When the webpage is opened, a black rounded border surrounds the page content. An orange banner at the top contains the university name in centered white text. Directly below it, the supplied photograph appears centered and occupies a large part of the upper page. The welcome message and remaining information are displayed on an orange background with white text.

The About Us text and course list appear below the welcome paragraph. The university information table follows, then the numbered facilities list and contact details. The final orange footer contains the copyright text. The page is a single-column, vertically arranged layout; the supplied CSS does not define a responsive grid, navigation menu, buttons or interactive features.

The contact hyperlink is the only explicit navigation link in the page. The email address is displayed as plain text in the supplied code and is not marked up as a mailto link.

7. Source Code – HTML

The complete HTML source below is reproduced from the uploaded collage.html file. Its original content and markup are preserved; only the document's code typography is applied for readability.

```
<!DOCTYPE html>
<html>
<head>
    <title>my collage</title>
    <meta charset="UTF-8">
    <link rel="stylesheet" href="collage.css">
</head>
<body>
    <div class="all">
    <header>
   <div class="class1">
    <div class="class2">

    <h1>Dr. RVR & NRI University</h1>
</div>
</div>
</header>
    <hr>
    <main>
        <section>
     <div class="class">
    <img src="imaaa.jpg.jpeg" alt="nri"></div>
    <hr>-
    <h2>Welcome to Our University</h2>
    <p>
        Dr. RVR & NRI University provides quality education and helps students develop knowledge and skills.
    </p></section>
    <article>

    <h2>About Us</h2>
    <p>

</body>
</html>
```

8. Source Code – CSS

The complete CSS source below is reproduced from the uploaded collage.css file without changing its declarations.

```
.class{
    text-align: center;
}
.class1{
    text-align: center;
}
.class2{
    background-color: darkorange;
    color:white
    ;
}
.all{
    margin: 12px;
    border: 5px solid black ;
     border-radius: 10px;
    padding:10px;

}
main{
    background-color: darkorange;
    color: white;
}
header{
    background-color: darkorange;
    color: white;
}
footer{
     background-color: darkorange;
    color: white;

}
```

9. Conclusion

This project demonstrates how HTML and CSS can be used to create a basic university information webpage. By completing it, I practised structuring content with headings, paragraphs, lists, tables, images and links, and applying styles such as colors, alignment, spacing and borders. The project also helped me understand how HTML content and CSS presentation work together to produce a webpage.

10. Source Notes and Limitations

- The screenshot uses the supplied local image file imaaa.jpg.jpeg. The image was available and displayed in the rendered output.
- The HTML contains a malformed table cell in the “Type” row (the opening td tag is missing). This issue is documented but has not been silently corrected, so the source code remains unchanged.
- The displayed email address info@example.com appears to be a sample-style address in the supplied code. This report does not verify that it is an active university contact address.
- The hyperlink target is https://www.rvrjc.ac.in/ and its visible label is “RVR & JC College Website”, exactly as written in the HTML. The report does not independently verify the relationship between that destination and the university name used in the page.
- The CSS does not specify font family, font size, responsive breakpoints or button styles. Therefore, the screenshot reflects default text styling where the source does not define a style.
